PROFESSIONAL SUMMARY

Full-stack developer who designs and ships complete web applications, from secure Node.js and Express REST APIs backed by MongoDB and Redis to polished React and Next.js interfaces written in strict TypeScript. Hands-on experience with authentication, API hardening, caching, background jobs, SEO and performance optimization. Bilingual (Arabic and English) developer focused on clean layered architecture and maintainable code.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend: React, Next.js (App Router), Tailwind CSS, shadcn/ui, Redux Toolkit, Context API, TanStack Query, React Hook Form, React Router, Framer Motion, Bootstrap
Backend: Node.js, Express, RESTful APIs, JWT, NextAuth, Joi, Multer, Nodemailer, BullMQ, Swagger / OpenAPI
Databases: MongoDB, Mongoose, Redis
Security: Helmet, CORS, Rate Limiting, bcrypt, argon2, AES-256-GCM Encryption, Input Validation
Tools & DevOps: Git, GitHub, Docker, Linux, Postman, Vite, ESLint, Prettier, Figma, Chrome DevTools
Practices: Clean Architecture, Unit and Integration Testing, SEO, Responsive Design, i18n / RTL, PWA

PROJECTS

Saraha App – Anonymous Messaging Backend API

Node.js, Express 5, MongoDB, Redis, BullMQ, JWT, Swagger
Source code: github.com/kamal-sorour/saraha-app

- Architected a layered Route → Controller → Service → Repository REST API with Joi validation on every route, centralized error handling and OpenAPI / Swagger documentation.
- Built the full authentication lifecycle: email confirmation, dual-token JWT (access and refresh), token revocation, logout from one or all sessions, and OTP-based password recovery.
- Hardened the API with Helmet, CORS allow-list, Redis-backed rate limiting, bcrypt / argon2 hashing and AES-256-GCM encryption of sensitive data at rest; designed anonymity-preserving response DTOs.
- Moved email delivery to a BullMQ queue with retries; added health probes, structured JSON logging, graceful shutdown, secure file uploads, and unit and integration tests.

Yassify – Premium E-Commerce Platform

Next.js 16 (App Router), React 19, TypeScript, Tailwind CSS v4, NextAuth, shadcn/ui
Live: yassify.netlify.app | Source code: github.com/kamal-sorour/e-commerce

- Delivered a complete shopping flow (catalog, cart, wishlist, checkout and order tracking) using React Server Components and Server Actions, in 100% strict TypeScript with zero any types.
- Secured private routes with NextAuth and middleware; added global, shop-level and auth-level error boundaries plus skeleton loaders matched to real layouts.
- Implemented dynamic SEO with generateMetadata (Open Graph, Twitter Cards, canonical URLs, sitemaps) and a responsive, dark-mode UI with live cart and wishlist counters through Context API.

Yass Social – Social Networking Platform

React 19, Vite, TanStack Query, Tailwind CSS, Framer Motion, React Router
Live: yass-route.netlify.app | Source code: github.com/kamal-sorour/yass-social

- Built JWT authentication with guest and protected route guards, and core social features: post CRUD, nested comments, likes, bookmarks, follow system, friend suggestions and a notifications hub.
- Optimized server state with TanStack Query (caching, optimistic updates, infinite scrolling) and added offline detection, skeleton loading and per-route SEO with React Helmet Async.

EDUCATION AND LANGUAGES

B.A. in Information Technology – Faculty of Arts, Tanta University

Expected Graduation: 2028
Relevant Coursework: Programming Fundamentals, Web Technologies, IT Fundamentals
Route Academy – Full-Stack Web Development Training
Languages: Arabic (Native), English (Good)
